

Lighting Design

Improve appearance, lower electric bills

Lighting design improves your space by optimizing the technology and layout of its lighting. It can yield up to 75% savings, as well as a more comfortable, welcoming environment for customers, staff, or students.

Deeper energy savings

Customers who use lighting design assistance can save considerably more compared to a simple retrofit

Improved appearance

Layout, quantity, and distribution of light is tailored to the needs of your space and building occupants

Better building conditions

Proper lighting can improve safety, performance and, in some cases, productivity

Is lighting design right for your building?

Top candidates for lighting design are those buildings with:

- Lamps that burn out often and/or experience high maintenance costs
- Areas of poor light distribution or inappropriate light levels
- Areas that lack lighting controls

How the design process works

1. Initial conversation

Efficiency Vermont will ask about your building, budget, and timeline.

2. Designer pairing

You'll be paired with a lighting designer to redesign your space for maximum energy savings and comfort.

3. Audit & design

Your designer will audit the building and provide a redesign proposal to Efficiency Vermont.

4. Energy savings analysis

We'll analyze the project for energy savings.

5. Incentives and financing

We'll determine applicable equipment rebates and, if desired, help you finance the rest of the project.

6. Lighting design review meeting

We'll meet with you and your designer to review recommendations.

7. Purchase & install products

You'll purchase and install products specified in your design.

8. Verification & completion

We'll verify proper equipment installation and mail you your rebate check.

Make the most of your upgrade

Our customer support team can provide technical expertise and connect you with a lighting designer if your space seems like it would benefit from a lighting design.

Rebates

Take advantage of our limited time financial incentives. We pay 75% of the rebate shown below up front, and the remaining 25% is paid when you complete your project.
